

Brain Code PRE-Simulation Confidence Survey

Please rate the accuracy of each statement below by placing a check mark in the box corresponding to your level of confidence with each of the following scenarios:

	Very Uncomfortable	Somewhat Uncomfortable	Neutral	Somewhat Comfortable	Very Comfortable
I am familiar with the key signs and symptoms of cerebral herniation.					
I understand the different types of cerebral herniation and their clinical features.					
I can identify scenarios in which elevated intracranial pressure and/or cerebral herniation are present and must be treated immediately					
I understand the difference between elevated intracranial pressure and cerebral herniation.					
I am able to identify patients who are at high risk of developing elevated intracranial pressure and/or cerebral herniation					
I am able to initiate appropriate medical treatment for a patient who is experiencing cerebral herniation					
I know what tests and treatments should be approached with caution in patients with elevated intracranial pressures					
I understand the pathophysiology of cerebral herniation and the mechanisms by which effective interventions work					
I can identify medical interventions that may actually worsen cerebral herniation					
I know which medication/s to immediately administer to a patient experiencing acute cerebral herniation.					

Have you ever been involved in a case where a patient was herniating? Yes No

Did you receive any teaching or training on management of elevated intracranial pressures in medical school or residency? Yes No
